4076. Longest Resilient Subarray II

Solved

Medium Hint

You are given an integer array `nums` and an integer `k`.

A subarray is **resilient** if, for **every** position in it, deleting the element at that position leaves the **remaining** elements with a **sum divisible** by `k`.

For a subarray of length 1, the remaining sum is 0, which is divisible by `k`.

Return the length of the **longest resilient subarray**.

Example 1:

> **Input:** nums = [2,4,6,3], k = 2
>
> **Output:** 3
>
> **Explanation:**
>
> The subarray `[2, 4, 6]` sums to 12. Deleting 2, 4, or 6 leaves a sum of 10, 8, or 6, respectively, each of which is divisible by 2. Therefore, the answer is 3.

Example 2:

> **Input:** nums = [1,4,7,1], k = 3
>
> **Output:** 4
>
> **Explanation:**
>
> The subarray `[1, 4, 7, 1]` sums to 13. Deleting the first 1, the 4, the 7, or the last 1 leaves a sum of 12, 9, 6, or 12, respectively, each of which is divisible by 3. Therefore, the answer is 4.

Example 3:

> **Input:** nums = [5,5,4,8], k = 4
>
> **Output:** 2
>
> **Explanation:**
>
> The subarray `[5, 5]` is not resilient, since deleting either 5 leaves a sum of 5, which is not divisible by 4.
>
> The subarray `[4, 8]` sums to 12. Deleting 4 or 8 leaves a sum of 8 or 4, respectively, each of which is divisible by 4. Therefore, the answer is 2.

Constraints:

- $1 <= nums.length <= 10^5$
- $1 <= nums[i] <= 10^5$
- $1 <= k <= 10^5$
