Java

```java
class Solution {
  public int resilientSubarray(int[] nums, int k) {

  }
}
```

JavaScript

```javascript
/**
 * @param {number[]} nums
 * @param {number} k
 * @return {number}
 */
var resilientSubarray = function(nums, k) {

};
```

TypeScript

```typescript
function resilientSubarray(nums: number[], k: number): number {

};
```

C++

```cpp
class Solution {
```

```
public:
  int resilientSubarray(vector<int>& nums, int k) {

  }
};
```

C#

```
public class Solution {
  public int ResilientSubarray(int[] nums, int k) {

  }
}
```

Kotlin

```
class Solution {
  fun resilientSubarray(nums: IntArray, k: Int): Int {

  }
}
```

Go

```
func resilientSubarray(nums []int, k int) int {

}
```
